

# The Censys Technology Alliance Program

The **Censys Technology Alliance Program** enables our partners to integrate trusted, real-time Internet intelligence directly into their platforms - helping customers gain deeper visibility into exposed assets, threat infrastructure, and evolving risk across the Internet.

## Empowering Users with Unmatched Intelligence

Born out of the ZMap project, Censys delivers a proprietary, real-time Internet Map that enables partners' platforms to discover, monitor, and analyze Internet infrastructure at scale.

**With Censys data, you can answer questions like:**

- ✦ What public-facing exposures does an organization or its supply chain have?
- ✦ Which vulnerabilities (CVEs) are present on Internet-accessible assets today?
- ✦ What adversarial infrastructure is related to a specific campaign or actor?
- ✦ What critical infrastructure in our region is exposed to attackers?

Through integrations with Censys, partners extend this intelligence directly into their workflows - helping customers strengthen their security posture.

## Censys Differentiators

### The most comprehensive, continuously updated Internet map

Continuous scanning of the public Internet across all ports and protocols provides real-time visibility into exposed infrastructure and attacker activity others miss.

### The world's largest structured certificate repository

An expansive X.509 certificate dataset enables deep inspection of encryption, certificate history, and infrastructure relationships.

### Rich, high-fidelity context for every asset

Detailed metadata - including software, protocols, CVEs, and fingerprints like JARM - gives security teams actionable insight without guesswork.

### Historical intelligence for investigation and trend analysis

Time-based snapshots allow teams to track exposure changes, investigate incidents, and understand infrastructure evolution.

### Deep visibility across all ports and non-standard protocols

Scanning across all 65K+ ports reveals hidden services and unexpected exposure that traditional tools overlook.

## Building Better Security Together

Through the **Censys Technology Alliance Program** our partners benefit from trusted Censys data and reliable integrations, access to technical integration resources, thought leadership collaboration, and technical support - driving innovation, increased market visibility, and better outcomes for customers.

## Who This Program Is For

The Censys Technology Alliance Program is designed for vendors building solutions in areas where Internet-scale visibility materially improves customer outcomes. Our partnerships include products in Threat Intelligence, Vulnerability Management, Attack Surface Management, Exposure Management, Incident Response, IT Service Management, CyberInsurance, Financial Forecasting Products, and many more.

## Getting Started

Apply to join the Censys Technology Alliance Program and start building differentiated, Internet-intelligent security solutions.

## Program Benefits

### Dedicated Technical Resources & Enablement

Access partner-focused technical resources that help streamline the integration process from API documents and interoperability validation to performance optimization and launch readiness. You'll benefit from technical guidance that ensures a best-in-class joint solution.

### Integration Marketplace Exposure

Gain prominent placement in the Censys Integrations Marketplace, making your solution easier for customers to discover and adopt. Pre-built, certified integrations accelerate customer onboarding and shorten time-to-value by enabling seamless workflows between your platform and Censys Internet intelligence.

### Go-to-Market Collaboration

Unlock joint GTM execution with Censys with coordinated demand generation campaigns, joint sales plays, co-branded collateral, and aligned account outreach to expand your reach with customers seeking integrated security solutions.

### Thought Leadership

Participate in high-visibility thought leadership activities such as webinars, industry briefings, case studies, whitepapers, research, and conference speaking slots that position your organization as an innovator. These opportunities showcase your expertise alongside Censys in front of security decision makers and technical audiences.

### Strategic Business & Channel Development

Benefit from strategic alignment with Censys' alliances team to explore channel-ready motions. This can include partner-to-partner introductions, reseller enablement, and roadmap alignment discussions that drive long-term, mutually beneficial growth.

Censys is the authority for Internet intelligence and insights. Delivering the most complete, accurate, and up-to-date global map of Internet infrastructure, Censys provides industry leading solutions for attack surface management, threat hunting, and proactive incident response. Global governments, Fortune 500 companies, and security providers around the world trust Censys to uncover risks faster, respond more effectively, and prevent breaches before they happen.
